

HIV-SUFFERERS MAY STAY HEALTHY

Doctors at London's Royal Free Hospital have recently released a report predicting that 25 per cent of those infected with HIV will still be alive and healthy after 20 years.

According to the computer projection, 15 to 20 per cent may be healthy after 25 years.

The research confirmed other studies that some HIV-positive people would survive for long periods free of illness.

There is an increasing number of doctors who claim that HIV patients are more likely to develop AIDS after using AZT and other toxic treatments, than they would be if they avoided drugs of high toxicity.

TALES OF THE CIA — 1

"It was, even by Georgetown standards, one helluva dinner party. It was the spring of 1960. The hosts were Senator and Mrs. John F. Kennedy. The guest of honour was John Kennedy's favourite author, Ian Fleming.

"Kennedy asked Fleming what his man James Bond might do if M. assigned him to get rid of Castro. Fleming had been in British intelligence... He was quick to answer. According to his biographer, John Pearson, Fleming thought he would have himself some fun...

"[He] said there were three things which really mattered to the Cubans—money, religion and sex. Therefore, he suggested a triple whammy. First, the United States should send planes to scatter [counterfeit] Cuban money over Havana. Second, using the Guantanamo base, the United States should conjure up some religious manifestation, say, a cross of sorts in the sky, which would induce the Cubans to look constantly skyward. And third, the United States should send planes over Cuba, dropping pamphlets to the effect that owing to American atom bomb tests, the atmosphere over the island had become radioactive, that radioactivity is held longest in beards, and that radioactivity makes men impotent.

attempted—or at least seriously considered."

TALES OF THE CIA — 2

As the Cold War ended, the CIA decided it needed to project "a greater openness and sense of public responsibility". So it commissioned a task force. On 20 December 1991, the committee submitted a 15-page "Task Force Report on Greater Openness".

It is stamped 'SECRET', and agency officials refuse to disclose any of the contents.

FUTURE QUAKES COULD TOPPLE WORLD ECONOMY

A new study of earthquakes predicts that a 'worst case scenario' quake near Los Angeles, San Francisco or Tokyo will kill only half the number of people previously estimated, but will cause double the economic damage.

The study was conducted by Haresh Shah, head of the Department of Civil Engineering at Stanford University in California, in collaboration with a private consultancy, Risk Management Solutions.

The report indicates that a large earthquake in the Tokyo area could force the Japanese to withdraw their estimated one trillion US dollars' worth of overseas investments in order to rebuild Tokyo. It is considered by many that such a withdrawal would probably lead to a global economic collapse.

The Four Elements

Somerville

ANOTHER COMET COMETH!

Astronomers have found a second fragmented comet on an Earth-crossing orbit.

First spotted by an amateur astronomer, Mr David Machholz of California, on 13th August, latest observations confirm the comet has broken into at least five large chunks, each roughly the size of a football stadium.

Dr Duncan Steel, of the Anglo-Australian Observatory, said that the comet Machholz II had a very short orbital period, returning every 6.5 years, during which it certainly moved inside the Earth's own orbit.

"We are in no immediate danger, because at the moment it doesn't come closer than 15 million kilometres to the Earth itself—but as both our orbits change with time, the two could intersect," he said.

"If it did strike Earth, it would make a nasty mess, as the Shoemaker-Levy impacts have shown."

The orbit of Shoemaker-Levy 9 changed quite dramatically once it fell under the influence of Jupiter's gravitational influence. First it was ripped into fragments, then it collided into Jupiter on the next pass.

Dr Steel said the discovery provided fresh support for a view that cometary disintegration posed the main risk to the future of humanity—not Earth being struck by a single large object.

"It's like being locked in a dark room with a homicidal maniac. Would you rather he was armed with a shotgun—or a rifle?" he said.

DNA DATABASE FOR THE UK

The UK is planning to set up a computerised national register of DNA profiles of everybody arrested for criminal offences.

The British Home Secretary, Mr Michael Howard, said it would be the first "genetic fingerprint" database of its kind in the world.

Measures contained in the Criminal Justice and Public Order Bill, which are expected to go through Parliament before the end of November, will allow police for the first time to take "intimate samples" from all suspects under arrest, whether they consent or not.

Police will be given sweeping powers to take DNA profiles from people arrested for any recordable offence, from shoplifting to murder, and the profiles will remain on file even when suspects are not taken to court.

Mr Howard said he did not know, yet,

what would happen to the DNA samples taken from people taken to court and acquitted.

Those serving sentences for serious offences, including crimes of sex and violence, will not appear on the database unless they offend again after their release.

A DNA profile can be obtained from samples of almost any body fluid or tissue. The samples taken by police will almost certainly be in the form of saliva from mouth swabs.

USA LEADS WORLD IN WORKPLACE SURVEILLANCE

The United Nations International Labour Organisation has found that workers in the United States are subjected to a higher level of audio, video and computer surveillance than in any other nation.

Americans are well aware that Big Brother is probably watching. Government studies have estimated that as many as 26 million workers may be regularly under surveillance.

When asked in a 1991 nationwide poll whether employers should be allowed to listen in on employee phone calls, 95 per cent said no.

Asked whether hidden cameras should be allowed to scan employee work areas, 56 per cent said no.

European countries such as Italy, Norway and Sweden already have restrictions on workplace monitoring. Germany has the most comprehensive law, limiting employer monitoring to areas agreed to in advance by workers.

Meanwhile, the US Congress is consider-

ing a bill which would require employers to tell workers when they were being filmed or recorded, to guarantee an employee's access to the data produced and to limit its disclosure. However, the legislation has been so strongly opposed by manufacturing associations that it has been stalled for at least three years.

VACCINATIONS — THE WITCH'S BREW

Besides introducing foreign proteins and live viruses into the bloodstream, each vaccine has its own preservative, neutraliser and carrying agent, none of which is indigenous to the body. For instance, triple antigen DPT contains formaldehyde, mercury (thimersol), and aluminium phosphate (*Physician's Desk Reference*, 1980). The packet insert accompanying the vaccine (Lederle) lists these poisons aluminium potassium sulphate, a mercury derivative (thimersol), and sodium phosphate. The packet insert for polio vaccine (Lederle) lists monkey kidney cell culture, lactalbumin hydrolysate, antibiotics, and calf serum. The packet insert for the MMR vaccine (Merke Sharp & Dohme) lists chick embryo and neomycin, which is a mixture of antibiotics.

An article in *Mothering Magazine* lists other toxic materials such as phenol (carbolic acid), alum (a preservative), acetone (a volatile solvent used in nail polish remover), pig or horse blood, cow pox pus, rabbit brain tissue, dog kidney tissue, and duck egg protein.

BATTLE FOR CONTROL OF WORLD'S SEEDS

Eighteen international agricultural research centres (IARCs) are the focus of a fight between developing countries and the World Bank.

The developing nations are fighting a bid by the World Bank to take command of the research centres which are vital to global food production.

The World Bank wants to control both the IARCs and their priceless collections of genetic varieties of crops. The developing nations claim that since most of these varieties come from their countries, control should go to them.

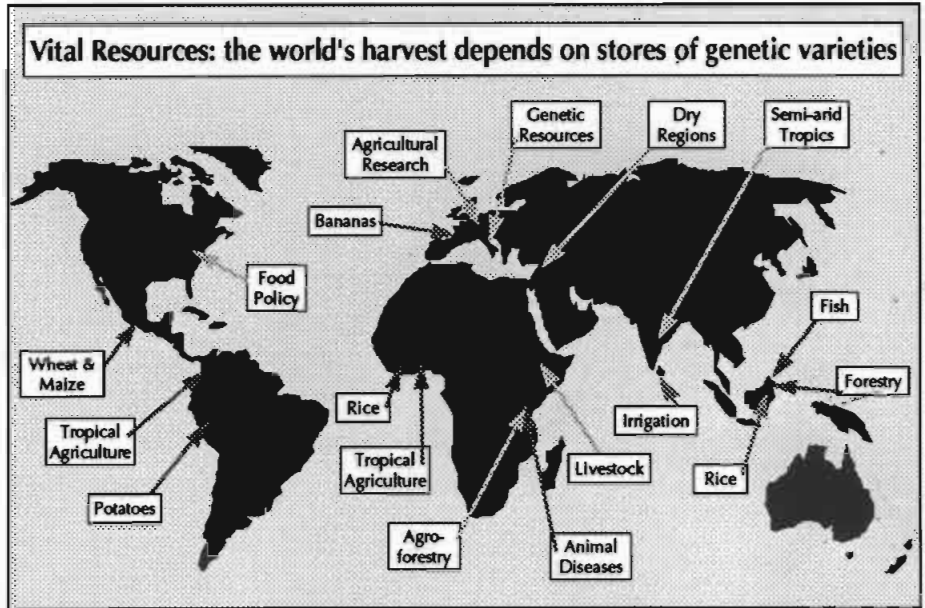

The 18 centres which were set up in the 1950s have been at the forefront of efforts to meet the increasing demand for food.

"The outcome of the present power struggle could have wide-ranging and profound effects," says Pat Mooney of Rural Advancement Foundation International, a development pressure group.

"If the World Bank controls agricultural research, then it controls the shape of world agriculture for the immediate future." He says the bank's backing for economic reforms in developing countries, which tends to favour cash crops over local subsistence, makes that a worrying prospect.

In May this year, the IARCs signed an agreement with the UN Food and Agriculture Organisation (FAO) to give control to the Intergovernmental Commission on Plant Genetic Resources, a body sponsored by the FAO and in which every member country has a vote.

But even though this plan had full approval from the FAO, it was rejected at a

meeting in Delhi by the Consultative Group for International Agricultural Research, the informal group of donors that funds the IARCs.

Normally this group exerts minimal control over the IARCs, which are otherwise independent, but in Delhi the group's chairman, Ismail Serageldin rejected the plan, and proposed establishing centralised committees headed by the World Bank, to control funding, research and intellectual property rights.

It just so happens that Ismail Serageldin is also the World Bank's Vice-President for Sustainable Development, and thus is in a good position to determine the amount of funding, if any, the eighteen centres will receive in the future.

YOUR HEALTH UNDER SIEGE

Recent amendments to the [Australian] health legislation, effective as from 1 July 1994, threaten to severely penalise doctors practising in the area of natural health. Doctors at high risk under these legislative changes are those who practise nutrition and environmental medicine, herbal medicine, homeopathy, ayurvedic medicine, and relaxation and meditation therapy.

Under this new legislation, clinically relevant, appropriate medical services by doctors to patients are defined as services which are "generally acceptable" to the body of medical practitioners.

Doctors suspected of "inappropriate servicing" can now be referred by the Health Insurance Commission to a Professional Services Review Committee which will determine whether their practice methods are acceptable or inappropriate. If the doctor's practice is determined to be "inappropriate", extremely heavy fines can be levied by the HIC, effectively driving that doctor into bankruptcy and forcing him/her to retire from medical practice.

This legislation has been designed to stop doctors rorting the Medicare benefits schedule—a laudable goal. However, doctors who practise natural medicine are at serious risk of being caught up in this legislative net and discriminated against for three reasons:

- 1) Their consultation and pathology-ordering profiles are quite different to those of more 'orthodox' GPs, so they are much more likely to be referred to the PSR Committee for "inappropriate servicing";
- 2) The PSRC's assessment guidelines

specifically exclude evaluation of the clinical outcome of the doctor's practice methods. A doctor practising natural medicine may be receiving a high cure-rate for his/her patients, but this is not deemed relevant to the decision of "inappropriate servicing";

3) The PSR Committee will be staffed by doctors of the Commonwealth Health Department and the Australian Medical Association who, because of inadequate knowledge or poor empathy, are highly likely to judge the practice of natural medicine as "inappropriate servicing"—so practitioners will not be assessed by a committee of their true peers who understand the practice of natural medicine.

ELECTROMAGNETIC FIELDS LINKED TO LEARNING DISABILITIES

A double-blind study utilising a system that clears up magnetic fields in the classroom, resulted in a 37 per cent decrease in student behaviour problems at the New Way School in Scottsdale, Arizona.

The system used is the Clarus CL-100 Electromagnetic Field Conditioning System from Clarus Systems Group. The New Way School is a private school for children, grades one through twelve, who have normal IQs but have learning difficulties and attention-deficit disorders.

VILIFICATION LAW — A TOOL FOR 'THOUGHT POLICE'?

A leading Aboriginal rights advocate, the lawyer and priest Father Brennan, has attacked laws aimed at stopping racial vilification and warned they could become a weapon for "thought police".

The proposed Bill has attracted enormous outcry and criticism across Australia. Media articles warn that not only does the Bill severely threaten freedom of speech, but it may end up harming the very groups it is designed to protect.

Little wonder the federal Attorney-General has refused to release the results of public meetings on the topic. It is understood that in at least two of the five public meetings, in Canberra and Adelaide, a clear majority of people were opposed to such laws, with Melbourne undecided.

CIA USING OLD TRICKS AGAIN

by Glenn Krawczyk

On 4th January 1994, the United States Government's Director of Central Intelligence (DCI), James Woolsey, called for a search of CIA records on human radiation experiments, pre-empting a call by the President for all relevant government agencies to make such records available to the congressional committee currently investigating human radiation experimentation conducted by government agencies throughout recent decades.

Subsequently, on 21st January the Central Intelligence Agency established the Human Radiation Experiments Steering Group, composed of representatives of all the agencies' directorates (including the staff of the DCI), to conduct such a records search.

A memorandum from the Advisory Committee Staff to the Members of the Advisory Committee on Human Radiation Experiments, dated June 27, 1994, which presented the "Initial Report on the Central Intelligence Agency Document Search" reported:

"To date the CIA has uncovered no records on Agency involvement in human radiation experiments."

This in itself is no surprise, given that the document search was focused only on whether the CIA itself had ever "deliberately subjected human beings to *ionizing* radiation, whether in tests to determine the effects of radiation on human beings or in efforts to discover operational uses for radioactive substances or their emissions".

By cleverly defining the terms of their search only to records of experiments conducted with *ionising* radiation—that is, radiation which causes tissue-heating in the subject—the CIA has so far managed to avoid disclosing to US Congress any records pertaining to their extensive and ongoing behaviour-modification programs, as the radiation devices used on human subjects for such purposes employ only *non-ionising* radiation.

The fact that such research falls outside the scope of the search is made clear in a footnote on page 4 of the memorandum which states:

"The CIA did investigate the use and effect of microwaves on humans in response to a Soviet practice of beaming microwaves on the US Embassy. The Agency determined that this was outside the scope of the Advisory Committee's purview."

By so precisely defining the scientific parameters of the document search specifically to exclude records of such experiments, the CIA is in fact tricking Congress and the public into believing they are cooperating with the investigations when they are, in fact, cleverly avoiding any disclosure of their ongoing experimental and operational use of radiation to remotely manipulate and control human behaviour.

The CIA employed exactly the same trick of terminology in 1977 to avoid revealing their development of microwave weapons to a congressional committee investigating the 25-year-long *MKULTRA* behaviour-modification research program.

The question is, will they get away with it again? The public must demand that they do not.

Directed-energy weapons currently being deployed in covert operations by the CIA include, for example, a microwave weapon manufactured by Lockheed-Sanders and used for a process known as "Voice Synthesis" which is the remote beaming of audio (i.e., voices or other audible signals) directly into the brain of any selected human target. This process is also known within the CIA as "Synthetic Telepathy".

This weapon, which might have been employed in covert operations for as long as two decades, was demonstrated by Dr Dave Morgan on Wednesday, 17th November 1993 at a classified Conference on Non-Lethal Defense, sponsored by the Los Alamos National Laboratories, and held at the Kossiakoff Center, Applied Physics Laboratory, at Johns Hopkins University, Laurel, Maryland, on 16th and 17th November 1993.

Reports recently appeared in one US defence magazine suggesting that the FBI deployed the weapon against David Koresh at the Waco siege to make him believe that God was talking directly into his head.

With the ongoing global escalation of violent crimes in which perpetrators report hearing "voices in their head", and the runaway US defence/intelligence community's unaccountable "Black Budget" reportedly running at over \$100 million *per day*, the future of democracy may well depend on the US Congress catching on to the CIA's semantic trickery *now*, while the hearings are still in progress—and then bringing the intelligence community to account for developing this range of microwave weapons which threaten to bring the entire world under the domination of a select group of Cold Warriors for whom the term "human rights" has absolutely no meaning.
